## Where We Are Today: Louisiana Restore Homeowner Program

- 20,740 applications submitted, representing 81% of the invited population.
- Of the applications submitted, only 262 applications, or 1%, are still pending grant determination.
- There has been a total of 12,742 grant awards offered to homeowners, totaling \$930,376,429.16.
- Of those, 10,377 homeowners have closed on their grant agreements, obligating \$761,741,300.54.

**Grant Awards Offered:** \$930,376,429.16

**Funding Disbursed:** \$373,757,719.62

Average Award Amount: \$72,981

Number of Projects Completed as of Sept. 2, 2024: 6,983

### **How We Got Here**

### **Action Plan Development – Determining Unmet Needs**

- · Referenced previous Federal Register Notices from prior appropriations to anticipate guidance
- In referencing previous FRNs, we were able to proactively develop the framework for the state's action plan ahead of time
- The state immediately began citizen engagement efforts following the 2020 disasters to gather data regarding
  impacts and unmet needs, beginning with local officials and personnel in the impacted communities.
- As part of the action plan process, the state used best available data sources to analyze unmet needs in impacted communities throughout the state.
- Detailed analyses of **losses sustained** and other available resources (FEMA, HUD, SBA) help us determine the dollar thresholds associated with damage in housing, infrastructure and economic revitalization.
- Review previous programs that can be refined for second iteration

8

### **How We Got Here**

#### **Program Survey**

- To help determine prioritization for program assistance, the survey included questions related to:
  - · Household income
  - Homeowner age
  - · Whether any member of the household has a disability
  - · Assistance applied for and/or received from other federal sources (FEMA, SBA, etc.)
  - · Assistance received from insurance providers
  - · Whether the damaged home's repairs are complete or incomplete
- The survey made the application process more efficient as every homeowner had their information pre-populated in the system.
- Along with streamlining the process for inviting potentially eligible homeowners to apply for assistance, information provided in the survey helped the program continue analyzing unmet needs along with beginning the ERR.

### **How We Got Here**

#### **Data Tools**

#### Data

- Prior to the official program launch, the state's software services partner was able to embed FEMA IA
  data into the program survey submission portal.
- Since applying for FEMA Individual Assistance was a criteria for the Restore Louisiana Homeowner Assistance Program, populating this information into the portal ensured that only those homeowners who met this baseline criteria were able to submit the initial survey.
- This allowed the program to phase assistance, prioritizing the most vulnerable.

### **How We Got Here**

### **Data Tools (continued)**

#### **Heat Maps**

- · Helped us assess and adapt our targeted outreach efforts for enhanced efficiency
- Allowed us to implement a data-driven approach and involved constantly assessing our datasets and
  analyzing our mapping tool to identify gaps and gauge success. Our maps used the FEMA IA dataset to
  reach the population most likely to qualify for program assistance, encouraging them to complete the
  initial program survey.
- Through all our efforts, we were able to see on a map where our efforts were most effective—or where we needed to direct more attention.
